Planning Statement

Application reference: 91.48267.FUL
Roseacre House, Barnby Dun, Doncaster, ZZ38 5BX

Introduction

The applicant's planning agent has been instructed to prepare and submit a proposal for the erection of a storage barn to be built as a facsimile of a storage barn recently demolished on the site.

Site description

The application site is a field/paddock at Roseacre House, Barnby Dun, Doncaster, ZZ38 5BX. The wider site is grassed, but the siting of the storage barn will be on the previous barn's exact footprint and no habitats or grassland will be affected.

The proposal

This application proposes the erection of a storage barn which is in keeping with the locality and exactly the same size and dimensions as the building that stood there until very recently. Final materials for facing/finishing can be conditioned.

Site location

The application site is located just outside the defined Settlement Boundary at Roseacre House, Barnby Dun, Doncaster, ZZ38 5BX. To the north, south and west of the site are agricultural and other small farm buildings; to the east are a bungalow and a pet hotel.

Design

The proposed new storage barn has been located within the site on exactly the same footprint as the previously demolished and recently in-situ barn. The design is fundamentally modest and in keeping with a rural area and will complement the existing built form along this road. The addition of natural screening would enhance the visual amenity of the locality.

Residential amenity

The siting of the building is set away from residential properties. There will be no material impact on neighbouring residents.

Flood risk

The site is within Flood Zone 3. The building would be built at a raised level with an internal floor level of +300mm.

Planning policy

The relevant Doncaster Local Plan policies are Policy 1: Spatial Strategy and Settlement Hierarchy; Policy 13: Promoting Sustainable Transport in New Developments; Policy 25: Development in the Countryside; Policy 26: Green Infrastructure; Policy 29: Ecological Networks; Policy 30: Valuing Biodiversity and Geodiversity; Policy 41: Character and Local Distinctiveness; Policy 56: Drainage; and Policy 57: Flood Risk Management. Policies 1, 26 and 41 are identified as strategic policies.

Justification

The storage barn has a footprint of approximately 190 square metres and has been drawn and designed to match exactly the size and shape of the very recently existing building. Proposed construction materials are exactly the same. The applicant needs to retain some value from the site, and the storage barn will have practical and financial value. The replacement of a very recently existing building with a facsimile is considered entirely acceptable, and we see no reason why the proposal cannot be approved without delay.

Conclusion

The proposal provides benefits to the applicant, gives the site practical and financial value, reflects the characteristics of the area and contributes positively to its appearance.
